Data quality & scope notes

Rounding adjustments on 31 invoice(s)

What	31 source rows carry a non-zero rounding/round-off residual. The engine keeps it out of the taxable and tax totals and folds it into the invoice value.
Why it matters	Rounding residuals are normal in Indian invoices but a persistent pattern can hide a mapping offset.
How to fix	No action needed unless the residuals are large or one-sided; if so, check the 'Other Amt.' column mapping.

TDS is not reconciled in this run

What	This run reconciled GST only. No Form 26AS or TDS return was part of it.
Why it matters	Deduction, deposit and 26AS reflection cannot be checked without those files, so any TDS position is unverified.
How to fix	Upload the Form 26AS and TDS source files and run a TDS reconciliation.

4 record(s) have no books side

What	These were seen only on the portal, so no books value could be compared.
Why it matters	They widen the difference without a counterpart amount to net against.
How to fix	Confirm whether they are booked under another ledger or genuinely missing.

Tax-component comparison (CGST/SGST/IGST/Cess)

What	Tax-component comparison (CGST/SGST/IGST/Cess) — not available (cess not mapped), so this check is skipped.
Why it matters	Without this check the report can only state the limitation, not a conclusion.
How to fix	Provide the missing column/file and re-run the reconciliation.

12 credit note(s) in the portal file were not reconciled

What	The portal file carries 12 credit note(s) (B2B-CDNR). No books-side debit/credit-note register was uploaded, and credit-note matching is not part of this reconciliation, so they were left out entirely rather than silently dropped.
Why it matters	A reconciliation that silently omits a class of documents would overstate its own completeness.
How to fix	Upload the missing source (e.g. a books-side credit/debit-note register) and re-run if these documents need to be reconciled.

IMS action status covers 80 portal document(s)

What	IMS statuses on the supplied export: Accepted 41, No Action Taken 27, Pending 12. IMS status is carried through as reference only — it does not drive matching in this build.
Why it matters	IMS status shows what a supplier has filed and what the recipient has actioned in the portal — useful context, but it does not drive matching in this build.
How to fix	No action is required for this reconciliation; review Pending / No Action items directly in the IMS portal if needed.

Source files used (2)

What	082026_07AAACP9472A1ZJ_GSTR2B_15092026 (1).xlsx, PurchaseRegister(Bill-wise) (1).xlsx
Why it matters	The report reconciles exactly these files for this period and nothing else.
How to fix	Replace a file and re-run if the source changed.

What this report covers

What	This reconciles the source files above for this period only.
Why it matters	It does not perform a statutory filing and does not pull live portal data.
How to fix	File the return from your filing workflow once the exceptions are decided.
